Projects

Destiny Data (ReactJS, Flux, Express, D3, Request)   Live | Github

A data visualization site that compares player stats from the popular Bungie game.
- Employs Express and Request to retrieve player data from the Bungie API
- Displays and compares the PvP stats of up to three players in a D3 radar chart
- UI allows users to break down their stats by various weapon categories

MiniPin (Rails, ReactJS, Flux)   Live | Github

Single-page web application inspired by Pinterest.
- Implements reusable React components in order to make code more modular
- Utilizes custom Rails query to search across multiple PostgreSQL tables for efficient data handling
- Integrates Cloudinary CDN and API component to upload and store images in the cloud
- Features a smooth, minimalist design and UI that gives users easy access to their content

Musical Dots (anime.js, howler.js, Canvas)   Live | Github

An interactive Javascript piece that visualizes music.
- Uses the anime.js library to create animations and howler.js to handle audio objects

Skills

Ruby	Javascript	React	SQL	HTML
Ruby on Rails	jQuery	Flux	Git	CSS

Education

App Academy   May - July 2016

Studied full-stack web development in an intensive 12-week course

University of California, Berkeley   August 2011 - May 2013
